SAYS

is that easy to use ?

is that application give 100% accuracy and result.

how much time that model takes to get output

is that application work on offline?

THINKS

what if the model works on non-numerical data such as alphabet.

how the model works when you give a digitally written images and numbers

if it is the model predicts not only a number, how it's going through.

how can be a user to modify a custom settings for my needs

DOES

is any other way to develop an application with added futures.
for example: the same model needs to find non-numerical data.

what if the application make any redundant error after I market the application.

is this model interact through hardware's to define the input data.

does the model to classify a digitally written data

FEELS

if i have any queries about my software how can i maintain in my application

what if I do the software is not work.

is that the software work on low end devices. how the software work on different platform.

what if i get a output of segmentation set of number. is the model perform group of classification.
